Subject: Sauget Document Index

Here is the Sauget document index (attached). The structure is
as follows:

Structure for database: F:\USER\JBARNEY\DBASE\SAUGET\SAUGET.DBF
Number of data records: 4722
Date of last update   : 10/07/93

Field	Field Name	Type	Width	Dec	Index
1	BEGIN_NMBR	Numeric	8		N
2	END_NMBR	Numeric	8		N
3	DATE	Date	8		N
4	TYPE	Character	20		N
5	SUBJ	Character	136		N
6	SOURCE	Character	30		N
7	CAT1	Character	20		N
8	CAT2	Character	20		N
9	CAT3	Character	20		N
10	RESP_NMBR	Numeric	2		N
11	AC_PRIV	Logical	1		N
12	DEL_PRIV	Logical	1		N
13	WP_PRIV	Logical	1		N
14	PRODUCED	Logical	1		N
15	COPIED	Logical	1		N
** Total **			278		

Most of the subject information you would want to search is in
the SUBJ field (surprise!), but sometimes the CAT1, CAT2, and
CAT3 fields are worth looking at as well. You may want to
combine these fields in your queries. The reference number you
will want to note for pulling documents is in BEGIN_NMBR. The
data base file is already sorted into numerical order by
BEGIN_NMBR. You can index by the DATE field, if that is of more
interest. Let me know if any questions.
